COHORT 16 DSML- MINI PROJECT DOCUMENTATION

Renewable Energy Transition Speed

Date:26/02/2026

DAY 2: MACHINE LEARNING MODEL TRAINING

Objective:
Transfer collected datasets to the Data Engineering team and initiate the preprocessing workflow for SDG-7 transition speed prediction.

Work Done:

- Packaged all collected datasets into the shared project repository.
- Provided dataset metadata, including source information, column descriptions, time coverage, and known data quality issues.
- Formally handed over datasets to the Data Engineering team.
- Conducted a briefing with Data Engineers covering:
    - Project objective (predicting renewable energy transition speed)
    - Expected target variable (renewable transition speed)
    - Key features (solar price, GDP, energy metrics, etc.)
- Confirmed file accessibility and integrity after transfer.
- Established folder structure for the data pipeline (Raw data, Processed data, Feature-ready data).
- Defined responsibilities for the Data Engineering phase.

Outcome:
Datasets were successfully handed over and the Data Engineering team was fully aligned to start preprocessing.

Group Discussion : Day 2
