COHORT 16 DSML- MINI PROJECT DOCUMENTATION

Renewable Energy Transition Speed

Date:25/02/2026

DAY 1

DATA COLLECTION AND CLEANING

Objective:

To identify, collect, and organize relevant datasets required for modeling Renewable Energy Transition Speed aligned with SDG 7 – Affordable and Clean Energy.

Work Completed:

- Defined the project objective of predicting renewable energy transition speed.
- Researched and shortlisted reliable data sources related to renewable energy analysis.
- Collected datasets covering renewable energy share, solar PV price trends, and key energy and economic indicators.
- Verified datasets for year-wise consistency, key indicator presence, and source credibility.
- Downloaded datasets in structured (.csv) format.
- Ensured common linking fields such as Year and Country/Entity for future merging.
- Performed initial inspection to check column structure, missing values, and data types.
- Organized datasets in the project directory for team access.
- Documented dataset sources and prepared a brief data inventory for handover.

Outcome:

Relevant raw datasets were successfully collected, verified, and organized. The data is now ready for preprocessing and further analysis.

Group Discussion : Day 1
